# Extrusion lines for pipes and profiles

The company Mikrosan is one of the biggest producers of extrusion lines. In the production portfolio of the company Mikrosan you can find single screw and twin screw extruders, lines for profiles and lines for pipes.

## Technical specification

- Extrusion lines Mikrosan have production capacity from 50—60 kg/h to 1000 kg/h
- Lines for pipes offer production capacity up to 1500 kg/h with diameter 8—1000 mm
- The cooling baths are available in two versions — vacuum and spray
- To ensure the synchronization of the whole process, we offer several types of haul-offs
- Cutting is done by guillotine, saw or rotary knives according to the profile type to prevent its deformation
- PLC control with specially developed software
